Press Release

FOR IMMEDIATE RELEASE

SiTest Solutions Ltd. Announces Opening of New Test Facility in Hong Kong

HONG KONG, May 19 2007 -- SiTest Solutions Ltd. announced today that they have opened a new semiconductor component Test Engineering Facility in Hong Kong. The Engineering Center will focus on IC component Test and Product Engineering activities, with special emphasis on assisting fabless and IDM companies targeting high-volume production in China. SiTest Solutions provides a full turn-key service for test transfer and implementation into China; from developing the test programs and hardware fixturing, transferring and installation into any production test facility in China, to sustaining and supporting the Product Engineering activities after installation.

"We are strategically located in Hong Kong so that we can provide direct access to any region in China", stated John Ritchie Managing Director of SiTest Solutions. John also highlighted that "SiTest Solutions' specialty is providing Test Engineering expertise to develop and fine-tune test programs for efficient high-volume production and then to transfer the enhanced set-up into a test subcontractor in China". After transfer into production, SiTest Solutions continues to support the product, becoming an extension of their customers' Test Engineering department. The technical staff is fluent in English, Cantonese, and Mandarin; and offers technical translation services for documentation and training. Additional satellite offices are scheduled to open in China later this year.

SiTest Solutions Ltd. is a provider of test solutions, test services, and production test strategies. They can provide consultancy for smaller specific projects such as test program or device related issues, all the way to larger scale projects like building, setting up and establishing a full production test operations facility in China. The company can develop test programs on a test platform selected by the customer or recommended by SiTest Solutions. They have also developed application specific test platforms for specific devices with the aim of lowering cost-of-test.
